Addendum

This addendum applies to suiteHEART® (software version 3.0.0) Instructions for Use, part number NS-03-008-0001.

suiteHEART® Software now supports remote connectivity capability. The remote connectivity capability allows suiteHEART® Software users remote access from computers not loaded with suiteHEART® Software. The remote user will have the ability to access the suiteHEART® Software system and have full functionality. Remote connectivity is supported for only a single concurrent remote connection.

suiteHEART® remote connectivity needs to be installed/configured/supported by your Information Technology personnel. Remote connectivity has been verified by NeoSoft using the following platforms:

- TeamViewer (version 11)
- Citrix GoToMyPC (version 8.4)
- Windows Remote Desktop (Microsoft Windows 7/8 Professional/Enterprise)

NOTE: When using Windows Remote Desktop, screen resolution on the remote computer must be set to 1920x1080 video display resolution.

The performance of the suiteHEART® Software via the remote connection cannot be guaranteed. Performance is dependent upon factors that are outside the scope of the suiteHEART® Software application. These factors include:

- Remote computer performance
- Internet download/upload speeds (Mbps)
- Network bandwidth speed (wired ethernet or wireless connection)
